

## STAINLESS STEEL ARTICLES PRODUCT SAFETY INFORMATION SHEET (SIS)

This information is provided in accordance with European Parliament and Council Regulation 1907/2006/EEC "REACH" and with reference to

- Regulation EC N°1272/2008 Classification, Labelling and Packaging (EU-GHS / CLP)
- Regulation EC N°790/2009 of 10 August 2009, ATP 1 of EC N°1272/2008 (including Ni and Ni compounds classification)
- Delegated Regulation EC N°217/2020, ATP 14 of EC N°1272/2008 (including Co classification update)

### Important foreword

Products supplied by UGITECH are considered as articles within the scope of REACH in accordance with the EUROFER position paper on steel articles (\*).

According to REACH-article 33, Safety Data Sheets as described in article 31 are not required for such products. Nevertheless UGITECH is willing to provide thorough safety information to its customers.

For an easier reading, the format of this information is similar to Materials Safety Data Sheets commonly available for chemical preparations in Europe and in other parts of the world (16 headings in accordance with GHS recommendations).

### Disclaimer

The information in this document was obtained from sources which we believe are reliable. However, the information is provided without any warranty, expressed or implied regarding the accuracy or correctness. The conditions of use, handling storage and disposal of the product are beyond our control and may be beyond our knowledge. For this and other reasons, we will not assume any responsibility and disclaim liability for damage or expense connected with the handling, storage, use or disposal of the product.

(\*) EUROFER position paper determining the borderline between preparations/articles for steel and steel products, 28 October 2008

<http://www.eurofer.eu/Issues%26Positions/REACH/EUROFER%20position%20paper%20determining%20the%20borderline%20between%20preparations%20and%20articles%20for%20steel%20and%20steel%20products.%2028%20October%202008.pdf>

### Applicability

This Product Safety Information Sheet is valid for articles made of stainless steels grades listed in ANNEX 1 and designated according to European standard.

According to the standard EN10020, stainless steel grades within the scope of this document are alloys containing Cr above 10.5% and C less than 1.2%.

For some applications such as cold heading or for special deliveries, the articles supplied by UGITECH may be covered or shipped with specific surface preparation or coatings made from different substances (oil, specific salts, metallic coating).

The information in this document refers to the bare stainless steel article.

## STAINLESS STEEL ARTICLES PRODUCT SAFETY INFORMATION SHEET (SIS)

### 1. Identification of products and company

**Brand name** UGITECH commercial designation is given in ANNEX 1 associated with relevant composition information. References to international standards are included to allow an easy access to a wider information on the composition. More precise analysis of the specific batch may be given when an analysis certificates has been requested and issued.

**Manufacturer** **UGITECH SA**  
**Importer Supplier** Avenue Paul Girod  
FR 73 403 Ugine CEDEX  
[ugitech.com](http://ugitech.com)

**Department supplying information** Pierre-Michel BONE  
REACH Manager  
UGITECH SA  
Avenue Paul Girod  
FR 73403 Ugine Cedex  
[pierre-michel.bone@ugitech.com](mailto:pierre-michel.bone@ugitech.com)

### 2. Composition - Information on substances in stainless steel articles

Ni content depends on specific grade and will range from 0 to 30% Nickel (Ni) (CAS 7440-02-0)  
max. 25% Chromium (Cr) (CAS 7440-47-3)  
max. 5% Manganese (Mn) (CAS 7439-96-5)  
max. 6% Molybdenum (Mo) (CAS 7440--)  
max. 0.6% Cobalt (Co) (CAS 7440-48-4)

Other elements may be present, such as Silicon (Si), Copper (Cu), Titanium (Ti). These are not classified as hazardous, or are below the concentration levels for classification of the stainless steels as hazardous.

Note that the approximate content of elements in concentration higher than 1% can be appreciated from the alphanumeric designation in ANNEX 1.

## STAINLESS STEEL ARTICLES PRODUCT SAFETY INFORMATION SHEET (SIS)

### 3. Hazard classification

The only substances important for hazard classification of stainless steel listed in ANNEX 1 in the solid form are Ni and potentially Co.

In accordance with (EC) Regulations 1272/2008 (CLP) and 790/2009 (CLP-ATP1), Ni is classified as a carcinogen category 2, Specific Target Organ Toxicity Repeated Exposure 1 and skin sensitizer 1. The CPL Regulation has introduced changes in the classification of Ni when compared with the Dangerous Substance and Dangerous Preparations Directives, which it superseded for mixtures starting 2015 June 1<sup>st</sup>.

As a result, stainless steels containing above 10%Ni, if considered as mixtures are classified as carcinogen category 2.

According to EC Regulation 1272/2008, alloys containing Ni are classified for skin sensitisation when the release rate of 0,5µg Ni/cm<sup>2</sup>/week, as measured by the European Standard reference test method EN 1811, is exceeded.

According to Delegated EC Regulation 217/2020 (CLP-ATP14), alloys containing Co are classified for skin sensitisation and as respiratory sensitizer when the Co content is above 1.0%. Classification as CMR 1B for alloys containing above 0.10%Co is on process.

<b>Description of hazards</b>	Dust and fume may be generated during processing e.g. in welding, cutting and grinding. If airborne concentrations of dust and fume are excessive, inhalation over long periods may affect workers' health, primarily of the lungs. Dust and fume quantity as well as composition depend on specific practice, on parent and welding material. Different alloying elements (including Cr and Ni) may be found under various oxidized forms in welding fumes. Welding or allied processes should only be performed by trained workers. Guidance such as American National Standard Z49.1 and German BGR-220 give valuable information on Safety in Welding and Cutting
-------------------------------	---

### 4. First Aid Measures

<b>Inhalation</b>	Not applicable to stainless steels in the massive form. Inhalation of dust and/or fume from welding, grinding, and cutting: operations are unlikely to generate the need for specific first aid
<b>Skin and eye contact</b>	There are no special symptom or effect associated with stainless steels. In the event of physical injury to the skin seek appropriate medical attention. In the event of physical injury to the eyes, seek immediate medical attention. Stainless steel particles may not always respond strongly to a magnet placed over the eye. In such cases seek hospital treatment
<b>Ingestion</b>	Does not apply to stainless steels in the massive form.

## STAINLESS STEEL ARTICLES PRODUCT SAFETY INFORMATION SHEET (SIS)

### 5. Firefighting measures

Stainless steels are not combustible in massive form. There are no special hazards or precautions associated with stainless steels in the vicinity of a fire.

Unusual fire or explosion hazard may rise from finely divided, suspended particulates in the presence of heat, sparks or flames. Such unstable atmosphere have been reported in sand blasting and grinding. The use of water should be avoided as it may cause explosive hydrogen gas generation.

### 6. Accidental release measures

Not applicable.

### 7. Handling and storage

There are no special technical measures involved for handling Stainless Steels. Normal precautions should be taken to avoid physical injury from coiled or bundled products, possibly with sharp edges:

- Straps or bands, used to secure some products, should not be used for lifting. Coils and bundled products (e.g. sections, rods, bars etc.) may spring apart when the banding is removed and the banding itself could cause eye or other injury when tension is released.
- Certain products may, as a result of processing, be brittle or have residual stress that might cause fracture or significant deformation.
- Some products are likely to have sharp edges that could cause lacerations and flying particles may be produced when shearing.
- Suitable protective clothing and equipment, such as hand and eye protection, should be worn and systems of work adopted to take account of any hazards arising from the risk of fracturing or the release of tension when breaking open banding.
- Suitable racks should be used to ensure stability when stacking narrow coils.

### 8. Exposure controls/Personal protection

**Occupational exposure limits** There is no specific occupational exposure limit for stainless steel articles. Occupational exposure limits (OEL) apply to some constituent elements (Ni, Cr, Mn, Cu, Mo ...) and certain of their compounds. There is no worldwide definition of exposure (short term, time-weighted average, ceiling limits, permissible values, recommended values) and the OEL limits are set to slightly different values in the different parts of the World (countries and even states or provinces within a country).

## STAINLESS STEEL ARTICLES PRODUCT SAFETY INFORMATION SHEET (SIS)

Table A shows limits acceptable according to current legislation in France (10) and Germany.

Substance	France Average Value (VME) mg/m <sup>3</sup>	France Max. value (VLCT) mg/m <sup>3</sup>	Germany Average Value mg/m <sup>3</sup>	Germany Max. value mg/m <sup>3</sup>
Chromium (metallic and Chromium III)	2			
Chromium VI, measured as Cr (**)	0,001	0,005	0,05 (E)	0,2
Copper (dust), measured as Cu	1	2	1 (E)	4
Copper (fumes)	0,2		0,1 (A)	0,4
Iron oxide (Fe <sub>2</sub> O <sub>3</sub> ) measured as Fe	5			
Manganese (fumes), measured as Mn	1		0,5 (E)	2
Molybdenum (soluble compounds) as Mo	5	10	5 (E)	20
Nickel (metallic)	1		0,5 (E)	2
Nickel (oxide), measured as Ni	1		0,5 (E)	2

(E) = *inhalant* – (A) = *alveolar* – (\*\*) Cr VI classified as CMR

## STAINLESS STEEL ARTICLES PRODUCT SAFETY INFORMATION SHEET (SIS)

Table B shows exposure limits of a few elements and compounds according to the current legislation or recommendations in the United States of America (\*).

Substance	US- OSHA Average (TWA) mg/m <sup>3</sup>	US-NIOSH Average (TWA) mg/m <sup>3</sup>	US-NIOSH Average (TWA) mg/m <sup>3</sup>	US-NIOSH Ceiling value mg/m <sup>3</sup>
Chromium (metallic)	1,0		0,5	
Chromium (trioxide), measured as Cr	0,5		0,5	-
Chromium VI, measured as Cr (**)	0,05		0,005	
Cobalt (metallic)	0,1		0,05	
Copper (dust), measured as Cu	1 (0,1 fumes)		1 (0,1 fumes)	
Iron (Fe <sub>2</sub> O <sub>3</sub> ) (fumes), measured as Fe	10		5 (fumes and dust)	
Manganese (fumes), measured as Mn		5	1	3
Molybdenum (soluble compounds) as Mo	15 (5)			
Nickel (metallic)	1		0,015	

(\* ) legal values are different in the different States    (\*\* ) Cr VI considered occupational carcinogen

The above tables are to be considered as indicative and in case of welding of stainless steels, the user should locally refer to the local applicable values.

**Exposure controls** In the processing of all metallic materials, exposure to fume and dust must be kept below any legally imposed limits in each country or state.

Dust and fume may be generated in use, e.g. by cutting, grinding and welding processes, which may contain materials subject to exposure limits.

To ensure these limits are not exceeded, adequate general or local ventilation or fume extraction should be provided

**Personal protection** In accordance with European and national health and safety regulations, it is necessary to assess the need for personal protection equipment and appropriate approved respiratory protection should be provided for those workers at risk of inhalation.

Suitable hand and eye protection should be worn where there is a risk of laceration, flying particles, burning or welding radiation or contact with oils during processing.

Hand protection equipment such as gloves is also important to avoid direct skin contact as skin sensitizer elements are present in the Ni containing stainless steels.

## STAINLESS STEEL ARTICLES PRODUCT SAFETY INFORMATION SHEET (SIS)

### 9. Physical and chemical properties

**Appearance:** Solid - metallic grey, ranging from dull to bright polish. Occasionally supplied with oxidized, blue/black surfaces.

**Odour:** odourless

**Water solubility:** insoluble

**Melting:** 1325°C to 1530°C

**Density:** 7.7 – 8.3 kg/dm<sup>3</sup>

### 10. Stability and reactivity

Stainless steels are stable and non-reactive under normal ambient atmospheric conditions. They may react in contact with strong acids to release gaseous acid decomposition products (e.g. hydrogen, oxides of nitrogen). When heated to very high temperatures fumes may be produced (e.g. by cutting, welding, grinding or melting operations).

### 11. Toxicological data

**Chronic toxicity, oral or inhalation** Specific stainless steels according to ANNEX 1 table 1 contain above 1% Ni - which has been classified in EC CLP as a suspect carcinogenic substance, Category 2 (i.e. "causing concern for man... but available information is not adequate for making a satisfactory assessment") - should also be classified as Carcinogenic Cat 2.

However, the exposure route of concern is inhalation. These Ni-containing stainless steels products are in massive form, not capable of being inhaled.

During mechanical working, flame cutting or welding, stainless steel dust, or fumes containing complex or mixed oxides (spinels) of its constituents, may be formed. Over long periods, inhalation of excessive airborne levels may have long term health effects, primarily affecting the lungs. However, studies of workers exposed to Ni powder and dust and fumes generated in the production of Ni alloys and stainless steels have not indicated a respiratory cancer hazard.

In the case of stainless steels, welding and flame cutting fumes may contain chromium oxides and hexavalent chromium compounds. Studies have shown that some hexavalent chromium compounds can cause cancer.

**Dermatological toxicity** Ni is classified as a skin sensitizer. It causes skin sensitisation in susceptible individuals through prolonged intimate contact with the skin (e.g. jewellery including piercing items).

According to REACH Regulation, Ni containing alloys shall not be used:

- (a) in all post assemblies which are inserted into pierced ears and other pierced parts of the human body unless the rate of Ni release from such post assemblies is less than 0,2 µg/cm<sup>2</sup>/week (migration limit).
- (b) in articles intended to come into direct and prolonged contact with the skin such as: earrings, necklaces, bracelets and chains, anklets, finger rings, wrist-watch cases, watch straps and tighteners, rivets, zippers and metal marks, when these are used in garments, if the rate of Ni release from the parts of these articles coming into direct and prolonged contact with the skin is greater than 0.5 µg/cm<sup>2</sup>/week.

## STAINLESS STEEL ARTICLES PRODUCT SAFETY INFORMATION SHEET (SIS)

**Dermatological toxicity** The standards EN 1811 adopted by the European Committee for Standardisation (CEN) shall be used as the test method.  
**(continued)** Some stainless steels having high Ni content or with above 0.10% S may not be appropriated for such uses. In such cases, testing of the final article is required.

### 12. Ecological data

No known harmful effects. No special precautions are required.

### 13. Disposal considerations

Surplus and scrap (waste) stainless steel is valuable and in demand for the production of prime new Ni containing alloys including stainless steels.

Recycling routes are well-established, and recycling is therefore the preferred disposal route. Disposal to landfill may not be harmful to the environment, but it is a waste of resources and therefore less desirable than recycling.

For dust and welding residues, recycling could be managed as well as waste treatment but disposal should be avoided.

### 14. Transport data

No special precautions required.

### 15. Regulatory references

**Classification** Nickel (CLP entry-028-002-00-7, CAS-No7440-02-0, EINECS-No231-111-4)

**and labelling requirements** Table below provides a direct comparison of the hazard classification of nickel provided by these items of legislation. In accordance with CLP, stainless steels with Ni<1% are not classified and those containing above 1%Ni are classified as Carc Cat 2.

## STAINLESS STEEL ARTICLES PRODUCT SAFETY INFORMATION SHEET (SIS)

Hazard according to EU Regulation 1272/2008 (CLP) and 790/2009	Hazard Statement according to CLP	CLP pictogram (*)	
Carc Cat 2	H351	 (GHS08)	H351: Suspected of causing cancer (state route of exposure if it is conclusively proven that no other routes of exposure cause the hazard) : inhalation route
Skin Sens 1	H317	 (GHS07)	H317: May cause an allergic skin reaction
STOT RE 1	H372		H372 : Causes damage to organs(state all organs affected, if known) through prolonged or repeated exposure (state route of exposure if it is conclusively proven that no other routes of exposure cause the hazard)

(\*) labelling is not necessary in Europe in the massive form

Cobalt (CLP entry-027-001-00-9, CAS-No7440-48-4, EINECS-No231-158-0)

Hazard according to EU Regulation 1272/2008 (CLP)	Hazard Statement according to CLP	CLP pictogram	
Resp. Sens. Cat 1	<b>H334</b>	 (GHS08)	H334: May cause allergy or asthma symptoms or breathing difficulties if inhaled
Skin Sens. Cat 1	<b>H317</b>	 (GHS07)	H317: May cause an allergic skin reaction
Aquatic Chronic Cat 4	<b>H413</b>	no pictogram	H413: May cause long lasting harmful effects to aquatic life

The above classifications of Co do not apply to stainless steels as their Co content is <1%. No Co is intentionally added to stainless steels. Due to the fact however that Co is present in raw materials stainless steel inevitably contains at least trace amounts of Co. Depending on the grade this can amount up to 0.6%. This has been the case for the past decades without any associated health risk.

## STAINLESS STEEL ARTICLES PRODUCT SAFETY INFORMATION SHEET (SIS)

Co does not have a harmonised classification today that would affect stainless steel classification. In vivo studies conducted with pure Co powder revealed a carcinogenic potency in Co metal powder when inhaled by test animals. The Co industry has proactively self-classified Co metal (all physical forms) as:

- Carcinogenic category 1B (H351) inhalation only
- Reprotoxic category 2 (H361F) (Provisional self-classification pending future testing)

According to the draft CLP-ATP14, stainless steels containing more than 0.1%Co could become classified in Europe as : Carcinogenic (C) category 1B (H350), Reprotoxic (R) category 1B (H360F) and Mutagenic (M) category 2 (H341).

According to IARC (International Agency for Research on Cancer), Ni is classified as Cat 1, Co as Cat.2B and Cr as Cat 3.

According to NTP (US National Toxicology Program), Ni is classified as Cat. R.

### 16. Other information

#### Materials for food contact

The Council of Europe published "Guidelines on metals and alloys used as food contact materials" in April 2013 as a reference document to ensure that metallic materials used in contact with food comply with the provisions of Article 2.2 of Directive 89/109/EEC (materials adapted to contact with food). The document includes a section on stainless steels and a paragraph on Ni.

The Swedish laboratory KTH has tested certain stainless steels according to the guidelines and used citric acid as food simulant (9). The use of citric acid in the new test guideline is relevant as it is commonly present in both acidic and alkaline food.

Those studies show that:

- None of the constituent alloying elements of stainless steel are released in amounts exceeding their corresponding release limits (SRLs), stipulated in the CoE protocol.
- Metal release rates decrease with time due to a gradually improved passivation of the stainless steel surface.
- Amounts of released metals diminish upon repeated use

#### Materials for medical devices

If Co content is a requirement for your market applications, you should specify this in the consultation and our Quality Metallurgy Department will propose a grade to meet your requirements in accordance with Regulation (EU) 2020/17 of 4 October 2019.

### Declaration

The information given in this safety data sheet is based on the present level of our knowledge and experience. The data sheet describes the products with respect to safety requirements.

The data given is not intended as a confirmation of product properties and does not constitute a legal contractual relationship, nor should it be used as the basis for ordering these products.

<b>Terms and definitions</b> (Ref. Guide ISO 51)	Harm:	Physical injury or damage to health of people or damage to property or the environment
	Hazard:	Potential source of harm
	Risk:	Combination of the probability of occurrence of harm and the severity of that harm
	Safety:	No acceptable risk

## STAINLESS STEEL ARTICLES PRODUCT SAFETY INFORMATION SHEET (SIS)

### ANNEX 1 List of grades used for UGITECH stainless steels articles

Number (1)	Type (2)	Alphanumeric (3)	Name (4)	Comment (5)
1.4922	M	X20CrMoV11-1		
1.4923	M	X22CrMoV12-1		
1.4980	A	X6NiCrTiMoVB25-15-2		a)

(1) Steel number according to EN10088 standard or to StahlEinsenListe reference

(2) Metallurgical type: A: austenitic - F: ferritic - M: martensitic - AF: austenitic-ferritic (duplex)

(3) Steel name (see EN 10027 standard) based on main chemical constituents - See (1) above or UGITECH datasheet for detailed information

(4) Specific UGITECH designation or Trademark

(5) Safety guidance

- a) steel contains >1%Ni - beware of potential sensitization
- b) steel contains Sulfur - generally not suitable for food contact
- c) use material with >13%Cr for food contact (see NF A 36-711:2002)
- d) steel may not be suitable for food contact with less than 13%Cr
- e) steel may not be suitable for some applications with prolonged skin contact
